CERES BLOCKCHAIN SOLUTIONS

A MEMO TO THE SORA COMMUNITY

This document accompanies the invoice sent to SORA for the services provided by Ceres Blockchain Solutions.

This memo will provide a description of the products, and the total amount of hours presented in invoice served by Ceres Blockchain Solutions to the SORA Community.

The services performed include the design, development, testing, and maintenance of the following products: Ceres Tools Website, Ceres Tools Mobile Apps (iOS and Android), Apollo Protocol and DEO Arena v2.
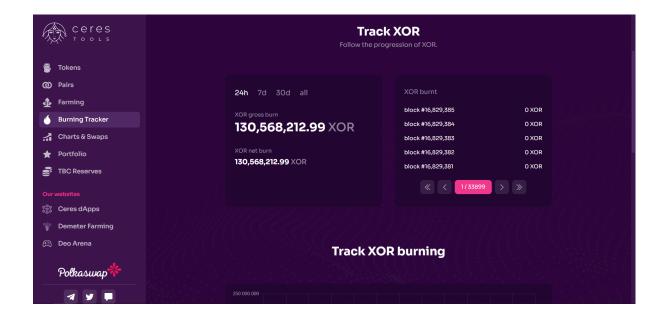

1 Ceres Tools Website – 122 hrs

Ceres Tools (https://tools.cerestoken.io) is a platform for tracking data from Polkaswap Decentralized Exchange (https://polkaswap.io).
Platform consists of six sections: **Tokens, Pairs, Farming, Burning Tracker**, **Portfolio**, **Charts & Swaps** and **TBC Reserves**.
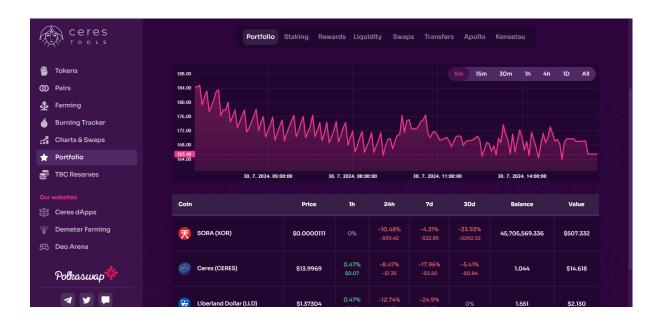

1.1 Burning Tracker

Until now, users could track VAL burning through fees, VAL through TBC, and PSWAP burning. With this release, users can now also monitor XOR burning and supply reduction. This is a significant feature for the community due to the new deflationary tokenomics of XOR.

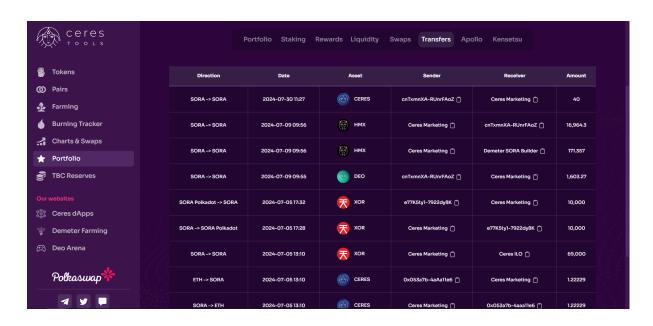

1.2 Portfolio

The portfolio feature enables users to track wallet holdings, staking, rewards, liquidity, swaps, and transfers. Additionally, users can monitor portfolio changes over 1-hour, 24-hour, 7-day, and 30-day intervals. This release is a major update for the Portfolio section, introducing several new features.
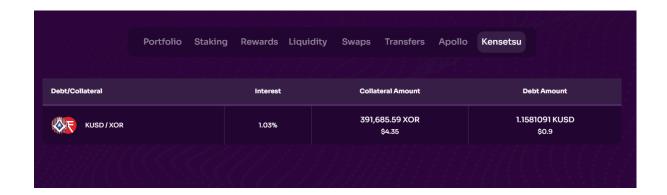

The first feature is tracking portfolio performance over time through a chart. Users can monitor the value of their portfolio at intervals of 5 minutes, 15 minutes, 30 minutes, 1 hour, 4 hours, and 1 day.

The second feature is related to Transfers. Users can now track not only transfers on the SORA network but also all other bridge transfers, such as SORA-Polkadot, SORA-Kusama, SORA-Liberland, and more.

And last but not least is tracking the Kensetsu positions of a given address.

# 2   Ceres Tools Mobile Apps – 30 hrs

Ceres Tools Mobile App is a Ceres Tools Website version as a mobile app. It is available for both Android and iOS. From this release, users can enjoy all the functionalities that have been added to the Ceres Tools website.

Ceres Tools Android App –
https://play.google.com/store/apps/details?id=io.cerestoken.tools
Ceres Tools iOS App –
https://apps.apple.com/gb/app/ceres-tools/id1590032285

3 Maintenance, issues and bug fixing – 10 hrs

4 Apollo Protocol – 23 hrs

The Apollo Protocol is the first lending and borrowing platform on the SORA network. Apollo enables its users to deposit and borrow assets on the SORA network. Depositors can provide liquidity and secure passive income through interest, while borrowers can leverage their assets without selling them and pay interest for this service.
Read more about Apollo Protocol on https://apollo-protocol.gitbook.io.

Using Apollo Lending & Borrowing Platform, users can experience seamless financial freedom and discover new opportunities.

Apollo Platform Updates:
- Introduce DOT with a maximum Loan-to-Value (LTV) ratio of 80%.
- Introduce KSM with a maximum LTV ratio of 80%.
- Introduce APOLLO with a maximum LTV ratio of 30%.
- Introduce XOR with a maximum LTV ratio of 30%.

In order for the Apollo platform to remain attractive to users, we listened to the community's voice and added those pools.

https://test.apolloprotocol.io is coming live soon. This will be the place where users can try Apollo Platform on the testnet before going to the mainnet.

5 DEO Arena v2 – 258 hrs

The DEO Arena is the first Play-to-Earn game on SORA. In-game currency is the SORA-native token Demeter (DEO). Players spawn in the arena and the goal is to eliminate opponents using different weapons. Each player enters the match with a certain amount of DEO tokens, which are taken by the winner at the end.

DEO Arena stats so far:

- More than 15,000 matches played
- More than 40,000 DEO burned
- More than 40,000$ distributed in rewards

At the insistence of the community, we started the development of DEO Arena v2. This version in the form of Battle Royale Multiplayer will look better and will be much more advanced, fun and playable than the first version.

Work on DEO Arena v2 has continued and is running at the planned pace. It's currently finishing up with the design of characters, in-game items, maps, etc., and at the same time, work is being done on the backend and the design of the main menu.
